

PCSANM tribute to Dr. Peter J. Lindberg

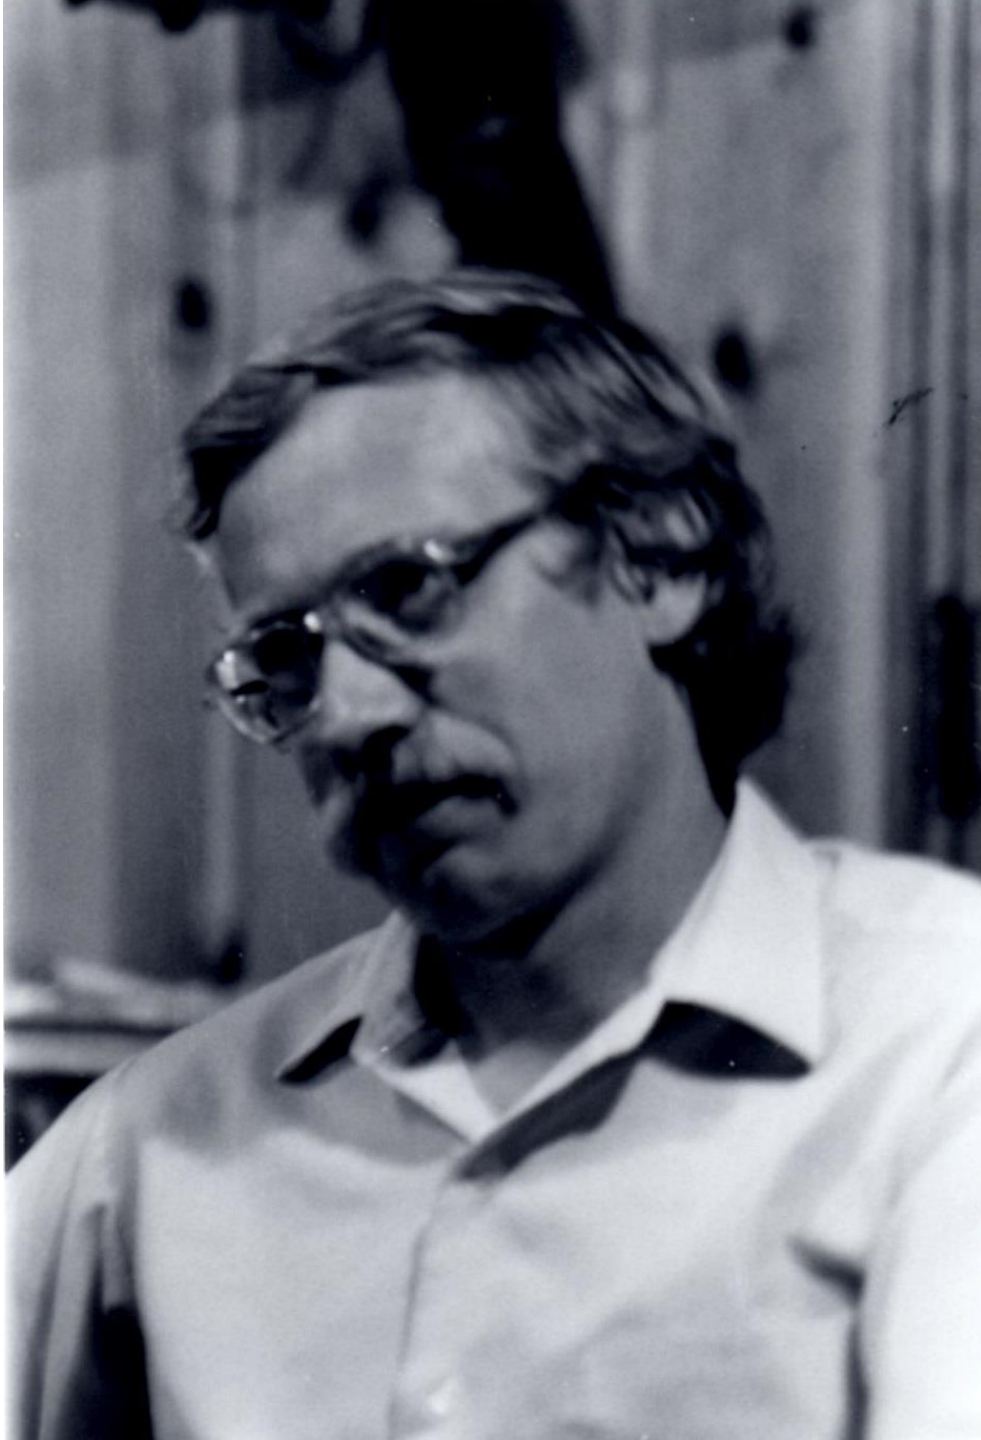

November 5, 2016

The Gospel of Hormone Therapy

- Initial treatment to include, at least 9 months:
 - Lupron or Firmagon
 - Bicalutamide 150mg daily
 - Avodart or Finasteride

Goal is PSA of 0 or less than 0.05

Intermittent therapy is OK. If using intermittent therapy use Avodart or Finasteride to prolong time with normal testosterone levels.

Thank you Doctor, for everything.

**Thanks to the Lindberg family,
and John and Ruth Bergerson of
Minnesota, for most of the pictures.**
